 Research 31 Jul 2024

Bentham Global Income stands out with its unique and broad approach, led by a highly skilled team, positioning it as an excellent choice for those seeking a higher-risk fixed-interest exposure. Bentham's investment team is relatively small locally but remains strongly led by managing director and portfolio manager Richard Quin, who continues at the helm alongside founding partners Nik Persic and Mark Fabry. The three senior members are supported by a dedicated team of eight with a blend of experience. This includes a mix of investment and data analysts, with three also sharing dealing duties. An arrangement with the former Credit Suisse Credit Investments Group now under the ownership of UBS also brings institutional-grade analysis for its largest allocations in high yield and loans. Bentham's focus is on identifying relative value across sectors and the capital structure, relying on both its top-down views and bottom-up research. Bentham seeks undervalued sectors and sectors where it is compensated for the risks. This has seen the manager make some significant shifts in credit sector and overall credit beta allocations over time, as well as changes in interest-rate positioning, which is reflective of the manager's high-conviction approach. To assist with this process, Bentham has invested heavily in visualization tools and other portfolio management systems. However, the manager continues to lack a dedicated risk oversight function, which is noteworthy given the growing allocations to derivatives in the portfolio. Bentham also tends to carry a higher credit allocation versus peers, which means the defensive characteristics of a typical bond fund aren't always present and thus can experience higher volatility at times. One of the attractive features of the strategy, however, is the capacity of portfolio hedges to provide some protection to returns in weaker markets. Unlike previous years where tail risk management was rewarded, the hedging book was a drag on performance over the 12 months to Sept. 30, 2023. While Bentham's 0.77% fee sits above peers, Bentham does manage across a broader global credit universe than most of its Morningstar Category peers, which requires

Morningstar Take by Morningstar Manager

Research 31 Jul 2024

The CFS Index Australian Bond strategy is managed by BlackRock's Australian fixed-income team as of June 15, 2024, and this raises our conviction on the offering. BlackRock's investment process for achieving low-cost index replication is established and differentiated via its scale and trading abilities, and the team is skilled and experienced in its implementation. Prior to this, the strategy was managed by First Sentier's Australian fixed-income team until its closure in April 2024. The strategy is now aligned with the flagship version of BlackRock's Australian Index Bond strategy and is a low-cost broad-based Australian fixed-income solution that tracks the Bloomberg AusBond Composite 0+ Index. Portfolio manager Craig Vardy and the supporting team have reliably replicated the underlying benchmark characteristics with a narrow tracking error. Historically, the fund returns have carried higher sensitivity to interest-rate changes owing to the portfolio's higher duration relative to the average peer. The higher duration can be attributed to the substantial allocation to long-term government and semigovernment bonds, which accounted for just over 90% of the total exposure as of June 30, 2024. The remainder of the portfolio mostly consists of corporate bonds and supranational securities. Thus, credit risk is low. In general, active managers possess the flexibility to adjust to interest-rate changes, whereas passive investments are bound to the benchmark with minimal control over their risk and duration profile. This was evidenced in 2021 to 2023 when more active managers outperformed the benchmark, while passives struggled. However, over the longer term, passives have shown more consistent alpha profiles relative to the Morningstar Category average. Overall, BlackRock's strong investment management platform, experienced team, and low fees are key attributes behind our conviction in this being a consistent proxy for domestic fixed-interest exposure. The primary vehicle from which this strategy's pillar ratings are derived is CFS Wholesale Index Australian Bond, ticker 11330. This vehicle has been assigned a Morningstar Medalist Rating of Bronze as of date July

Morningstar Take by Kongkon Gogoi 21 Dec 2023

The CFS Index Global Property Securities is a reasonable choice for gaining passive exposure to the global property market via a sensibly diversified index. Carved out of the broader FTSE EPRA Nareit Developed Index, the underlying benchmark FTSE EPRA Nareit Developed ex Australia Rental Index NTR (AUD hedged) comprises names that earn 75% or more of their EBITDA from rental income-producing activities. The portfolio is spread across multiple sectors, allowing Australian investors access to property subsectors not well represented in the local market, such as hospitals, data centers, communication towers, and self-storage. A tilt toward the United States and the exclusion of Australian REIT securities makes it a plausible option for global REIT exposure. That said, we believe investing in the global property market can be better exploited by astute active investors. Another noteworthy aspect here is the rental REITs' high sensitivity to global economic conditions. A passively managed strategy does not offer any safe harbor when economic conditions become unfavorable (or deteriorate). We think an active manager has more tools to manage macro risks better. For instance, higher-rated active strategies lost less than their passive counterparts when interest rates started to increase from the end of the first quarter of 2022 and remained elevated until the end of November 2023. The underlying outsourced manager, State Street Global Advisors, is a robust index tracker, which bodes well for the strategy. However, CFS' contribution in the process, where it executes the critical function of cash management, lacks the execution prowess of better-rated peers. The highly rated peers of CFS have consistently delivered added performance over the index on an annual basis. In our view, this is attributable to CFS' cash management not being at the same level as its passive peers, tampering with our overall view of the strategy. The recent personnel turnover in the team, which began with the departures of Scott Tully and Peter Dymond, the erstwhile CEO and head of portfolio management, respectively, has now largely settled. Following key departures, under the guidance of new

Morningstar Take continued from previous page

CIO Jonathan Armitage, the team has expanded and restructured, notably with the creation of a cash management and derivatives unit led by industry veteran John Iles. It is indeed encouraging to witness CFS' commitment to addressing our concerns regarding cash management inefficiencies. The CFS team restructuring appears to be a positive step forward; however, given the recent nature of these changes, with some adjustments still in progress, we remain vigilant to allow sufficient time to gauge the full impact of these changes before our conviction level is strengthened. In essence, the CFS Index Global Property Securities doesn't give us the same confidence as its competitors mimicking similar indexes. However, an attractive fee structure and the presence of a capable underlying manager tracking a suitably representative diversified index make an acceptable investment case for the strategy. The primary vehicle from which this strategy's pillar ratings are derived is CFS Index Global Property Securities, ticker: 42209.

Morningstar Take by Kongkon Gogoi 21 Dec 2023

CFS Index Global Bond is an acceptable passive offering for Australian investors in the global fixed-interest segment. The strategy tracks the Bloomberg Global Aggregate Bond Index (AUD Hedged), a diversified global bond index consisting of predominantly high-quality securities. The portfolio spans across Treasuries (52%), corporates (18.4%), and government issuances (15%), with the remainder in securitized debt (as of November 2023). U.S. bonds constitute a substantial part of the portfolio (39%), while most of the remainder is spread across Europe and Asia. We view this index as a sensible choice for developed-markets bond exposure. That said, we opine that this portfolio has a few inherent risk characteristics that are better suited for active managers to navigate. Specifically, the lengthening duration of the portfolio (6.5 years as of November 2023), not to mention its inflexibility around country/sector distribution, are significant risks to an investor's overall portfolio. We think active managers have more levers to navigate global bond-market risk events such as periods of rising interest rates, inflation, or scenarios of economic or political instability. The underlying outsourced manager, State Street Global Advisors, is a robust index-tracker, which bodes well for the strategy. However, CFS' contribution in the process, where it executes the critical function of cash management, continues to lack the execution prowess of better-rated peers, tempering our overall view of the strategy. The recent personnel turnover in the team, which began with the departures of Scott Tully and Peter Dymond, the erstwhile CEO and head of portfolio management, respectively, has now largely settled. Following key departures, under the guidance of the new CIO, Jonathan Armitage, the team has expanded and restructured, notably with the creation of a cash management and derivatives unit led by industry veteran John Iles. Morningstar Take by Kongkon Gogoi 20 Dec 2023

CFS Index Global Shares is a sound choice to gain global equities exposure at a reasonable price. This fund offers a sensible way to invest in global equities, as many active strategies generally struggle to deliver better risk-adjusted performance in this segment. This strategy's approach boasts the right blend of the index, a strong underlying index tracker, and cost. While these three features earn our conviction, we view the strategy's execution as less efficient than its peers. The target index, MSCI All Country World Ex Australia Equities Index, is synonymous with global equity market exposure. The index provides very efficient access to a broad portfolio of giant- to large-cap stocks from 22 developed- and 24 emerging-markets economies. This index is a high hurdle for active managers to beat in the global equity market segment. The underlying outsourced manager, State Street Global Advisors, is a robust index-tracker, which bodes well for the strategy. However, CFS' contribution in the process, where it executes the critical function of cash management, lacks the execution prowess of better-rated peers. While the highly rated peers of CFS have consistently delivered added performance over the index on an annual basis, aided by the tax withholding benefits received for investing in global equities, CFS Index Global Shares lacks that consistency. In our view, this owes to CFS' cash management not being at the same level as its passive peers. The strategy's investment process does not inspire the same conviction we have bestowed upon its competitors, tracking a similar broad-based index. The recent personnel turnover in the team, which began with the departures of Scott Tully and Peter Dymond, the erstwhile CEO and head of portfolio management, respectively, has now largely settled. Following key departures, under the guidance of the new CIO, Jonathan Armitage, the team has expanded and restructured, notably with the creation of a cash management and derivatives unit led by industry veteran John Iles. It is indeed encouraging to witness CFS' commitment to addressing our concerns regarding cash management inefficiencies. The CFS team restructuring appears

to be a positive step forward; however, given the recent nature of these changes, with some adjustments still in progress, we remain vigilant to allow sufficient time to gauge the full impact of these changes before our conviction level is strengthened. Nevertheless, the strategy still has some appealing features that support its investment merit case. The presence of a well-representative underlying index, a strong index-tracking manager, and a reasonable fee make the strategy a viable option for global equities exposure. The primary vehicle from which this strategy's pillar ratings are derived is CFS Wholesale Index Global Share, ticker:11333.

Morningstar Take by Kongkon Gogoi 13 Dec 2023

CFS Index Property Securities remains a solid choice for local Australian property sector exposure. The strategy mimics the risk/reward profile of the S&P/ASX 200 A-REIT Index. Carved out of the broad-based S&P/ASX 200 Index, the A-REIT index tracks the performance of 23 Australian real estate investment trusts and mortgage REITs from the large- to mid-cap spectrum. The size of the Australian REIT market is small and concentrated, with just 45 listings on the ASX as of October 2023. Evidently, the lopsided exposure is a default characteristic of the market, and being a passive vehicle, CFS' portfolio is perhaps more concentrated compared with active peers (the top 10 holdings weigh 81% as of October 2023). This concentration issue is further amplified by the remarkable performance of Goodman Group's stock over the past five years. The stock now constitutes approximately 32.4% of the portfolio. Still, empirically, only a few active managers in our coverage have outperformed the benchmark over the long term, thereby making the appeal of passive strategies strong in this market segment. This is because the index represents virtually the entire investable universe, leaving less room for active managers to add value. As such, S&P/ASX 200 A-REIT is a highly recommended index for local property exposure. Of course, the passive approach means the risk management around interest-rate movement is inefficacious, but evidence suggests that active strategies aren't the safe harbor either when the rate cycle moves up. For example, when interest rates moved up sharply in 2022, local property prices came under severe pressure, and the entire sector came under pressure. In that environment, active managers on average didn't outperform the index, both losing about 20%. While Realindex, the underlying outsourced manager, demonstrates robust index tracking capabilities, CFS' execution of the crucial cash management function doesn't match the proficiency of better-rated peers. This discrepancy hampers our comprehensive assessment of the strategy. In essence, the CFS Index Property Securities doesn't yet give us the same confidence as its competitors mimicking similar indexes. A

Morningstar Take continued from previous page

pivotal and progressive development within the recent overall transformation in the CFS team has been the establishment of a new team (or unit) focused on cash management and derivatives, with seasoned superannuation industry veteran John Iles at its helm. The recent enhancements at CFS are promising, yet caution is essential. We're closely monitoring this fund's performance across market cycles, considering its size and potential impacts of large cash flows and market volatility on tracking of the underlying index. Given the recent nature of these changes, with some adjustments still in progress, we remain vigilant to allow sufficient time to gauge the full impact of these changes before our conviction level is strengthened. In summary, an attractive fee structure and the presence of a capable underlying manager tracking a highly efficient index still make a sound investment case for the strategy. The primary vehicle from which this strategy's pillar ratings are derived is CFS Wholesale Indexed Property Security, ticker 7005.

Morningstar Take by Morningstar Manager

Research 31 Jul 2024

Fidelity Australian Equities cements its distinguished status with a 20-year track record from its esteemed manager applying an enduring quality-driven process. Paul Taylor has run the strategy uninterrupted since 2003. In January 2022 he was made head of investments at Fidelity Australia, although this additional role is not an impost on his time. Undoubtedly, he is the key architect behind the investment philosophy, process, and portfolio construction for the strategy, which has always presented significant key-person risk. The appointment of Justin Teo and Zara Lyons as assistant portfolio managers provides an opportunity for knowledge dissemination but is not viewed as succession planning. The investment process has remained broadly unchanged since 2003, seeking solid businesses with competitive advantages and promising industry dynamics that display attractive value, based on a longer-term normalized-earnings cycle. The differentiators that set Taylor apart from his rivals are the disciplined five- to seven-year focus on companies that have the potential to be structural winners and those showing an upside earnings or operating cash flow surprise. The final element bringing it all together is the measured conviction-based portfolio construction that prevents outside mistakes. As the stocks' investment theses and earnings trajectory gains traction, the allocation increases commensurately. Domino's has been a prime example; it was initiated as a small position in 2007 and reached top-10 holding status over time before being sold in 2022. These portfolio management skills have been validated by the success achieved since its 2003 inception, where the portfolio has delivered alpha of almost 2% per year above the benchmark to August 2023. Overall, Fidelity Australian Equities is a rare strategy that has a skilled and tenured manager applying his quality-focused investment process with consistent execution, thus continuing to be viewed in the highest regard. The primary vehicle from which this strategy's pillar ratings are derived is Fidelity Australian Equities, ticker 12292. This vehicle has been assigned a Morningstar Medalist Rating of Bronze as of date July

Morningstar Take by Morningstar Manager
 Research 31 Jul 2024

FSI Australian Small Companies has an exceptional team and repeatable process that continue to earn our highest regard. Head of Australian small- and mid-cap companies Dawn Kanelleas has led this strategy since 2008. Kanelleas is capably supported by two long-standing portfolio managers in Michael Joukhador and Pavlos Totsis and assistant portfolio manager in Tahlia Gugusheff. The breadth and depth of analytical insights from this collegial unit are impressive, which further enhances the team-based approach here. Team stability also features, as Kanelleas, Joukhador, and Totsis have worked together for 14 years. This stability has aided in the consistent execution of their investment process, which is to find companies with durable competitive advantages. Under Kanelleas' tenure, there has been an increased focus on balance-sheet strengths and reliable cash flows, which is sensible given the higher inherent risks in small-cap companies. The fund has typically displayed a mild growth lean, though there's a healthy mix of names across the value-growth spectrum. This strategy's strong performance over the past several years has not gone unnoticed, with assets at AUD 1.4 billion as of June 2023. The team runs around AUD 3.7 billion in small caps (including its mid-cap and long-short strategies), easily one of the largest footprints in the cohort and making this strategy less nimble than peers. However, our concerns around capacity are partially assuaged by the strategy's liquidity considerations at the stock level, tendency to invest in more-liquid small-cap names, higher-than-average portfolio diversity (typically 40-60 names), and relatively low portfolio turnover. Nevertheless, capacity remains a watchpoint. Over the trailing 10 years to Oct. 30, 2023, the strategy has comfortably outperformed its Morningstar Category index and most peers. The final showpiece is the strategy's low annual management fee of 1.11%, with no performance fee, which is highly attractive compared with peers. All in all, FSI Australian Small Companies consistent investment process and its strong tenured team continue to warrant our highest conviction. The primary vehicle from which this

Morningstar Take by Morningstar Manager
 Research 31 Jul 2024

GQG Partners Global Quality Equity (named GQG Partners Global Equity outside the US) succeeds with a talented manager, a robust analyst staff, and a highly original approach. Lead manager Rajiv Jain has racked up an impressive record running several funds during long tenures at previous employer Vontobel and at GQG, which he co-founded in 2016. This global strategy, launched in Australia in June 2017 and in the US in late March 2019, has flourished. Its results were especially noteworthy in 2022's dismal market conditions and in early 2024. (Its strong gains in 2023 didn't stand out in a powerful broad market rally.) The institutional shares of the US-domiciled fund lost only 3.7% in 2022, while the strategy's MSCI All Country World Index benchmark dropped 18.4% and the global large-stock growth Morningstar Category (for US-based fund) plunged 27.9%. In the first four months of 2024, the US institutional shares soared 13.7%, far above the category average (which rose 4.5%) and the benchmark (up 4.6%). Jain and his colleagues achieved these results by heavily weighting stocks common in other portfolios—such as recent top-10 holdings Meta Platforms, Alphabet, and Novo Nordisk—while also profiting immensely from lesser-known stocks such as AppLovin and subsidiaries of the India-based conglomerate Adani. In addition, Jain is exceptionally willing to make unorthodox moves and shift direction decisively. For example, at the end of 2021, Meta was absent from the portfolio; two years later, it was the number-one holding at nearly 8% of assets. At a sector level, the portfolio held no energy stocks at all in 2020 but stashed more than 20% of assets there throughout 2022. Meanwhile, Adani had been the target of a scathing short-seller's report that had sent most investors scurrying. Jain and team investigated, decided the criticism was overblown, and picked up shares that had declined sharply in price. The stock soon shot upward. Decisive shifts of sector and bold moves into controversial stocks can easily backfire. But Jain has taken such steps before—though not as frequently—and has proven his abilities over more than two decades. This offering isn't for the meek but holds

Morningstar Take by Morningstar Manager Research 31 Jul 2024

We maintain our conviction in Magellan Infrastructure thanks to its highly experienced investment team and disciplined investment process, which adopts a clearly defined but risk-averse approach to investable infrastructure. The strategy's investment team is a knowledgeable and well-resourced group of eight infrastructure/utilities specialists, consisting of five portfolio managers and three investment analysts. Gerald Stack (head of infrastructure and lead portfolio manager) helps the strategy and is an investor we have held in high regard since our coverage of the fund commenced in 2015. While key-person risk can't be fully discounted, we are pleased that Stack and his team have remained stable, focused, and committed during the distractions that have occurred within the broader Magellan business since early 2022. Magellan Infrastructure's fundamental investment process is long-established, time-tested, and rigorously applied. The investment process is more conservative than most peers owing to a strict definition for investable infrastructure, while portfolio construction is disciplined. Under Magellan's investment process, a company must possess an asset that is essential for the efficient functioning of society and have earnings that aren't overly affected by competition, commodity prices, or sovereign risks to be considered for inclusion. This risk-conscious approach typically leads to a greater utilities allocation, though allocations to cyclicals can rise should the view of economic conditions be more optimistic. This measured outlook tends to deliver downside protection in market selloffs, but the strategy can lag during more cyclically driven markets. This was evident in 2022 when the strategy's absence of commodity price-sensitive infrastructure stocks saw the fund materially lag the category benchmark. Despite the risk of short-term deviations from the benchmark, the process is well aligned to investors who allocate to infrastructure for inflation and downside protection. Magellan Infrastructure's strengths include an insightful team, a conservative investment process, and a disciplined portfolio construction methodology. The primary vehicle from

Morningstar Take by Morningstar Manager
 Research 31 Jul 2024

JOHCM Global Emerging Markets Opportunities (Pendal Global Emerging Markets Opps in Australia) benefits from experienced managers and an established process. Reflecting our strong conviction, the People and Process ratings are maintained at Above Average and High, respectively. Managers James Syme and Paul Wimborne have worked together since 2006 (first at Barings, then JOHCM since 2011). In January 2022, Ada Chan, who has been part of the team since 2016 as a dedicated senior analyst, was promoted to a fund manager. She had already been involved in bottom-up stock selection previously, so from then on she became involved in portfolio construction and top-down implementation as well. Unlike many peers, the investment approach is driven by top-down analysis of the 26 countries making up the MSCI Emerging Markets Index. The managers continue to use the framework employed at their previous house, producing an overall score for each country and views on the attractiveness of various characteristics. At the stock level, the investment style is growth-at-a-reasonable-price. Managers are evaluating stocks for their value and growth appeal through quant screening as well as company visits. The strategy should do well in most market environments given its GARP approach. However, large country bets can affect the performance profile, both positively and negatively. For example, the large underweightings in Taiwan and South Korea were negative for the fund's performance in 2023 as the markets more exposed to technology and manufacturing recovered from weak prior performance, while the managers were cautious on these two markets given concerns about the ongoing slowdown in global trade. Nevertheless, since taking over the strategy in June 2011 to Dec. 31, 2023, the longest-running share class A for the strategy's Ireland-domiciled vehicle has been comfortably ahead of the MSCI Emerging Markets Index and peers. It is pleasing to see that both country allocation and stock selection have added value. Overall, the pragmatic approach with a focus on attractively priced growth stocks should help the strategy to outperform over the cycle. This vehicle has been assigned a

Morningstar Take by Kongkon Gogoi 01 Mar 2024

Realindex Australian Share Value Class A stands out as an excellent choice for investors aiming for a value-focused core exposure within the domestic market at a compelling cost. Our steadfast belief in its capacity to consistently outperform the S&P/ASX 200 Index benchmark in the long run is bolstered by our continued conviction in Realindex's strong investment team and in the strength of its investment process. The fundamental tenet of Realindex's investment process is the efficient implementation of the four-factor model. It applies equally weighted metrics of adjusted book value, adjusted sales, cash flow, and dividends to uncover undervalued stocks. Additionally, the team continuously seeks to add incremental value to the investment process without compromising its core tenets by incorporating more sophisticated signals identified after thorough research. A few notable examples of such enhancement signals are the integration of overlays to discern quality and near-term value, as well as to adjust for momentum. A maximum deviation rule of 25% from the core accounting-weighted universe ensures the process stays true to its metrics. Realindex's approach has been consistent through multiple economic cycles, notwithstanding the fact that the investment team had a succession of changes in recent years. The strength of its investment team is another important factor that bodes well for the strategy. The addition of David Walsh, Ron Guido, and Joana Nash marked a crucial turning point in enhancing the team's stability and capabilities. This transformation was especially notable as the team navigated a transition period following the departure of a senior portfolio manager and the conclusion of the partnership with U.S.-based Research Affiliates. More importantly, Realindex has successfully demonstrated that turnover in the team has not resulted in a material impact on its investment capabilities. A robust research project pipeline, together with the efficient implementation of an innovative alpha signal overlay on the investment process since the arrival of the new team, underpin our improved conviction in the team's collective ability. In summary, Realindex

Morningstar Take by Kongkon Gogoi 08 Mar 2024

In the pursuit of value-focused global equities at a low cost, the Realindex Global Share Value-Class A shines as a fine choice. Our confidence in this strategy's consistent potential to outpace its peers and build long-term wealth for investors remains steadfast. The strategy's solid research-focused systematic investment process run by a strong investment team is the cornerstone of our continued confidence in the strategy. The fundamental tenet of Realindex's investment process is the efficient implementation of the four-factor model. It applies equally weighted metrics of adjusted book value, adjusted sales, cash flow, and dividends to uncover undervalued stocks. Additionally, the team seeks to add incremental value to the investment process without compromising its core tenets by incorporating more-sophisticated signals identified after thorough research. A few notable examples of such enhancement signals are the integration of overlays to discern quality and near-term value, as well as adjusting for momentum. A maximum deviation rule of 25% from the core accounting weighted universe ensures the process stays true to its metrics. The outcome of the process is a diversified portfolio, favoring large- and giant-cap value names and sectors of relative value. As such, the strategy continues to deliver uneven performance given that the value factor is cyclical, but we have conviction in the fund's long-term performance. This strategy remained true-to-label despite the conditions that have challenged its approach in the past. The strategy benefits significantly from the strength of its investment team. The addition of David Walsh, Ron Guido, and Joana Nash marked a crucial turning point in enhancing the team's stability and capabilities. This transformation was especially notable as the team navigated a transition period following the departure of a senior portfolio manager and the conclusion of the partnership with US-based Research Affiliates. The team's resilience is evident in its ability to maintain a robust research project pipeline. That, together with the efficient implementation of an innovative alpha signal overlay on the investment process since the

Morningstar Take by Morningstar Manager

Research 31 Jul 2024

Schroder Australian Equity has some notable qualities that continue to warrant our highest conviction. The conscientious leadership of a skilled team and the diligent application of a time-tested process align with key elements of the Morningstar Medalist Rating process. Head of Australian equities Martin Conlon has managed this fund since 2003, after joining Schroders in 1994, while deputy head of equities Andrew Fleming has been with Schroders since 2007 and has 30 years of investing experience. Conlon and Fleming are especially thoughtful in researching companies and understanding the economic backdrop when building the portfolio. In addition, the broader investment team is knowledgeable and perceptive. Turnover for the team has been elevated over the past three years, with 2023 seeing the departures of portfolio managers Joseph Koh and Ray David. That said, the team remains well-resourced, with Ben Chan and Adam Alexander proving credible additions to the team, having joined in 2022. Schroders' investment process involves detailed fundamental bottom-up company assessments to gain an understanding of quality and value. The primary focus of the research is appraising a company's pricing power, long-term sustainability, and midcycle earnings. We appreciate the team's assiduous application of the repeatable investment process. In addition, we applaud the team's multiple-perspectives approach when scrutinizing company risks, including environmental, social, and governance issues and thematic influences. The resulting benchmark-aware portfolio of around 40-70 stocks is long-term, balanced, and value-tilted. The strategy has recovered from its underperformance against the index between 2018 to 2020, with decent outperformance over the past three years to September 2023. In addition to its competitive fee, Schroders' strong qualities increase our confidence in the manager's outperformance over the long term, thus warranting a core position in investors' portfolios. The primary vehicle from which this strategy's pillar ratings are derived is Schroder WS Australian Equity WC, ticker 8847. This vehicle has been assigned a Morningstar Medalist Rating of Bronze as of

date July 31, 2024. An analyst assessed the People, Process, and Parent Pillars of this strategy, and this vehicle inherited the analyst's views via StrategyID and AdvisorID. There may be a delay for updated analysts' views on primary vehicles to populate across all associated vehicles of the same strategy. For the most up-to-date analyst views, please review the primary vehicle of this strategy's pillar ratings.

Managed Fund Investment Detail Disclosure Statement - Advanced

Quick Stats

Morningstar Category™

Based on exposure to asset classes, investment sectors, the investment style and market-cap allocation, and the associated risk and return characteristics of funds. The objective of the classification system is to provide groupings of funds which can be reasonably considered to be close investment alternatives and for which performance and other statistics such as fees are comparable.

Morningstar Medalist Rating™

Is the summary expression of Morningstar's forward-looking analysis of investment strategies as offered via specific vehicles using a rating scale of Gold, Silver, Bronze, Neutral, and Negative. The Medalist Ratings indicate which investments Morningstar believes are likely to outperform a relevant index or peer group average on a risk-adjusted basis over time. Investment products are evaluated on three key pillars (People, Parent, and Process) which, when coupled with a fee assessment, forms the basis for Morningstar's conviction in those products' investment merits and determines the Medalist Rating they're assigned. Pillar ratings take the form of Low, Below Average, Average, Above Average, and High. Pillars may be evaluated via an analyst's qualitative assessment (either directly to a vehicle the analyst covers or indirectly when the pillar ratings of a covered vehicle are mapped to a related uncovered vehicle) or using algorithmic techniques. Vehicles are sorted by their expected performance into rating groups defined by their Morningstar Category and their active or passive status. When analysts directly cover a vehicle, they assign the three pillar ratings based on their qualitative assessment, subject to the oversight of the Analyst Rating Committee, and monitor and reevaluate them at least every 14 months. When the vehicles are covered either indirectly by analysts or by algorithm, the ratings are assigned monthly. For more detailed information about the Medalist Ratings, including their methodology, please go to the Section titled "Methodology Documents and Disclosures"

<https://shareholders.morningstar.com/investor-relations/governance/Compliance--Disclosure/default.aspx>

% Data Coverage: the level of data completeness used to generate the overall rating. If the pillar is assigned directly or indirectly by analysts (pillar inheritance), the pillar will have complete data (i.e. 100%). If the pillar is assigned by machine learning algorithm, Morningstar counts the number of data points feeding both the positive and negative models and counts whether the vehicle has strategy-specific data available. A percentage is calculated per pillar. The overall % data coverage is then scaled by pillar weights. Morningstar will not produce a Medalist Rating with less than 80% data availability for algorithmically assigned pillar assessments.

Analyst-Driven Proportion: displays the weighted percentage of a vehicle's pillar ratings assigned directly or indirectly by analysts (pillar inheritance). For example, if the Parent and Process ratings are assigned directly or indirectly by analysts but the Process rating is assigned algorithmically, the Analyst-Driven Proportion for an actively managed vehicle would disclose that 55% of the pillar weight was assigned by analysts. In the case of a passively managed vehicle the Analyst-Driven Proportion would disclose that 90% of the pillar weight was assigned by analysts.

Morningstar Pillars: The three Medalist Rating assessment pillars - People, Parent and Process - may be evaluated via an analyst's qualitative assessment (either directly to a vehicle the analyst covers or indirectly when the pillar ratings of a covered vehicle are mapped to a related uncovered vehicle) or using Morningstar's machine learning algorithm. Pillar ratings take the form of Low, Below Average, Average, Above Average, and High. Pillars evaluated with Morningstar's machine learning algorithm are displayed with "Q" behind the Pillar name.

Morningstar Rating™

The rating is calculated for funds with at least a three-year

history based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a fund's monthly performance. The top 10% of funds in each peer group receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The peer group is determined by the fund's Morningstar Category and Legal Type. The Overall Morningstar Rating for a fund is derived from a weighted average of the performance figures associated with its three-, five- and ten-year Morningstar Rating metrics.

Morningstar Take

The Morningstar Take is a summary of Morningstar's overall opinion of the fund manager's strategy and capabilities in the asset class. If Morningstar has not qualitatively reviewed the manager, the PDS Objective and Fund Investment Strategy will appear in its place.

Performance

The performance data given represents past performance and should not be considered indicative of future results. Principal value and investment return will fluctuate, so that an investor's shares when redeemed may be worth more or less than the original investment.

Growth of \$10,000: The graph compares the growth of \$10,000 in a fund with that of a capital market index chosen by Morningstar and with that of the average growth for all funds in its Morningstar peer group. The index is an unmanaged portfolio of specified securities. The index and the category average do not reflect any initial expenses however the category average returns are net of ongoing fees. A fund's portfolio may differ significantly from the securities in the index.

Quartile Rank: The graph represents the fund's total return percentile rank among funds in the same peer group. The black bar on the graph represents the quartile in which the fund-performance ranking falls. If the top quarter of the graph is shaded, for example, the fund performed among the top 25% of its category that year.

Total return reflects performance without adjusting for sales charges but is adjusted to reflect all actual ongoing fund expenses and assumes reinvestment of distributions. Growth return is the percentage change in the scheme's soft close exit price adjusted for any capital re-organisation. Income return is the total return less growth return and reflects the level of distributions from a fund. For Australian funds, performance is not adjusted for taxation. For New Zealand PIE funds, tax credits are added back to the performance. For New Zealand non-PIE funds returns are calculated net of tax. Trailing returns for periods over one year are annualised.

Risk Measures

Standard deviation: Statistical measure of the volatility of the fund's return.

Sharpe ratio: A risk-adjusted measure calculated by using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe Ratio, the better the fund's historical risk-adjusted performance.

Alpha: A measure of the difference between a portfolio's actual returns and its expected performance, given its level of risk as measured by beta. A positive Alpha figure indicates the portfolio has performed better than its beta would predict.

Beta: A measure of a fund's sensitive to market movements. If beta is greater than one, movements in value of the fund that are associated with movements in the value of the benchmark tend to be amplified.

R-Squared: Measures the relationship between a portfolio and its benchmark. It can be thought of as a percentage from 1 to 100. R-squared can be used to ascertain the significance of a particular beta or alpha. Generally, a higher R-squared will indicate a more useful beta figure.

Fees

Total Cost Ratio (Prospective): Represents the

forward-looking figure encompassing the total non-discretionary fees and costs associated with managing and administering collective investment products.

Buy-Spread/Sell-Spread: A transaction cost incurred by the investor that reflects an estimated transaction costs incurred by the fund in dealing with the underlying securities as shown in the PDS.

Performance Fee Costs: Performance Fee shown in the "Fees and Costs Summary" table in the PDS. It is intended as a representation of potential on-going performance fee expenses and is a calculated average using the performance fee costs from the last five financial years (or as many as the performance fee was applicable). This amount includes the Performance Fee costs arising from Interposed Vehicles.

Investment Management Fee: The Management Fee (MIS) and Investment Fees (Super) shown in the PDS, that is attributable to investment management, which are fees and costs an investor would expect to be charged over the year. This excludes the costs arising from interposed vehicles.

Administration Fees and Costs (Super Funds only): shown in the "Fees and Costs Summary" table in the PDS. This includes OTC Derivative Costs deemed to be Administration costs.

Portfolio

Composition: The graph represents a breakdown of the fund's holdings into general investment classes based on surveyed data provided by the fund manager.

Morningstar Style Box: For equity funds the vertical axis shows the market capitalization of the stocks owned and the horizontal axis shows investment style (value, blend or growth). For fixed-income funds the vertical axis shows the average credit quality of the bonds owned, and the horizontal axis shows interest rate sensitive as measured by a bond's duration (short, intermediate or long).

Top Holdings: The largest exposure of eligible securities within a fund's portfolio. Portfolio holdings information is based on the most recent information available to Morningstar, and eligible securities are defined by Morningstar's Global Methodology team, and will exclude positions not considered core to the portfolio.

Top 5 Sector Weightings: The Morningstar sector structure divides the stock universe into 129 industries ranging from semiconductors to medical equipment. These industries are classified into 41 industry groups, which are then used to construct 12 separate sectors.

Top 5 Countries: The largest geographical exposure of a fund's stock assets. Country assignments are based on the primary exchange where each stock is traded.

Operations

Minimum Initial Investment: The smallest investment amount accepted by the product to establish a new account.

Minimum Additional Investment: The amount required to make subsequent investments in the product.

Minimum Withdrawal: The smallest amount that can be taken out of the product at one time.

Switching Allowed: If it's possible to switch between investments in the same offer document.

Distributions Frequency: The number of times per year a fund intends to distribute for the life of the offer document.
