### Morningstar Take by Simon Scott 11 May 2021

Colchester Global Government Bond remains a strong choice, benefiting from a well-designed, robust process and a strong, collegial team, but it may experience material swings in relative performance. Fixed-income veterans and Colchester co-founders Ian Sims, Keith Lloyd, and Kathryn Elsby have worked together since 2000 and lead an experienced investment team. We're particularly impressed by the collegiate culture set by these three architects, which promotes probing enquiry and rational decision-making. Colchester values and harnesses talent, nurturing a strong lineup of potential successors, and we like that the process was designed so that no one star portfolio manager dominates. Colchester applies a value-oriented philosophy to investing in government bonds and currencies. It is a clear, simple and repeatable process centered on assessing value using proven economic frameworks--expected inflation-adjusted real return and purchasing power parity forecasts over the medium term. A welcome characteristic is the combination of systematic modelling and fundamental analysis, which fosters discipline and repeatable outcomes. The latter is underpinned by detailed country financial stability research, which is where the team really excels. We were also impressed with the work conducted on building environmental, social, and governance considerations into the strategy. The financial stability scoring comes into its own in emerging markets, a region requiring greater circumspection. This strategy runs a significant allocation here in both bonds and currencies, where its riskier characteristics come to the fore during periods of capital flight. The long-term value-driven approach and materially differentiated regional exposures may lead to material spells of relative over- and underperformance, such as in November 2020 when it outperformed by around 130 basis points. Although fees were cut in 2016, they remain higher than average and a minor headwind. Despite this, Colchester is an excellent choice for investors seeking something different.

## Morningstar Take by Ross MacMillan 24 Aug 2021

Fidelity Australian Equities receives our highest rating, with its key strengths being an outstanding portfolio manager, thoughtful investment process, and well-structured portfolio methodology. Paul Taylor has been with Fidelity since 1997 and portfolio manager of this strategy since 2003. His impact on the philosophy, process, and portfolio construction have been overwhelmingly positive during the past 18 years. Undoubtedly, the strategy's success has been primarily due to Taylor's decisions, abilities, and skill, which is judicious, given the reasonably high turnover of analysts in Fidelity's nine-person Sydney-based research analyst team over the past five years. Ultimately, it is Taylor's talent as a portfolio manager that has set the strategy ahead of competitors. Fidelity has no distinct house investment style, apart from focusing on bottom-up fundamental stock research, but Taylor has established a well-structured, long-term, and highly competent investment process for this strategy. Importantly, Taylor's signature long-term "through-the-cycle" investing style has a strong preference for stocks with solid businesses, competitive advantages, and promising industry dynamics. The investment process also favours companies that have a reasonable probability of surprising positively on both earnings and operating cash flow growth. In a market that is often too focused on short-term issues, Taylor's emphasis on the long term and structural winners sets him apart from many peers. An example is Domino's Pizza Enterprises, which entered the portfolio in 2007 as a small position; by mid-2021, as the share price hit all-time highs, it was the largest overweight position in the portfolio. Long-term outperformance is extremely difficult to achieve through the cycle, but the strategy has outpaced the index and most peers over five and 10 years to 31 July 2021, on a trailing returns basis. Fidelity Australian Equities is built on the solid foundations of long-term investing, consistency, and reliability and receives our highest conviction.

**Morningstar Take** by Edward Huynh 15 Apr 2021

FirstChoice Emerging Markets offers investors sensibly managed exposure to emerging markets through a diversified multimanager offering, though a standout feature is difficult to pinpoint. Colonial First State's senior investment team members are experienced and have worked together for nearly two decades, and the team has fastidiously added to the team in recent years. Scott Tully leads the 11-member portfolio management team as general manager and oversees the multimanager strategies. Andrew Howlett is responsible for the portfolio construction of global equity strategies, including this vehicle, and is capably supported by Peter Dymond and new hire Chetan Soorkea, who joined in April 2020. The team use Mercer in an advisory capacity to assist with manager screening and due diligence, but the lion's share of manager research is conducted by the in-house team with 600-plus manager meetings a year. The portfolio's underlying investment managers represent a variety of strategies and styles. Wells Capital, which manages around 30% of assets, is a low-beta, fundamental manager. Franklin Templeton is a bottom-up, value-oriented manager, whereas Fisher Investments is a top-down, thematic manager. They each manage one fourth of assets. Finally, Origin Asset Management uses a benchmark-agnostic, factor approach with a growth orientation, and handles around 20% of the portfolio. The manager lineup has been remarkably stable with no manager changes since 2012. We view this positively and it speaks to the team's conviction in the underlying managers. Pleasingly, their conviction has been rewarded with performance comfortably outpacing the MSCI Emerging Markets Index since 2012 landing within the first quartile over one, three, and five years. While the fund's underlying managers have performed well, the high fee level makes sustained outperformance challenging, though it includes around 20 basis points of platform fees. Overall, FirstChoice Emerging Markets is a reasonable way to get exposure emerging markets, but the lack of standout features and fee impost temper our conviction.

**Morningstar Take** by Chris Tate 17 May 2021

FirstChoice Global Property Securities delivers well-diversified exposure to the global listed property sector, but we don't see tangible traits to elevate it above more aspirational offerings. Scott Tully leads an established multi-manager team comprising some veterans among its senior ranks. Leroy Qian is the lead portfolio manager here, having assumed the reins from Ben Lam in March 2021 as Lam shifted his focus to the shop's Australian equities capabilities. Qian continues to have Lam's support as back-up, a role which Qian previously held for several which ensures familiarity with the strategy. The pair adhere to the firm's preference for relatively straightforward multi-manager portfolios, underpinned by credible submanagers. They seek a combination of approaches to ideally generate a smoothed path of outperformance above benchmark. FirstChoice entrusts DWS with a majority 40% portfolio allocation, while Resolution Capital (35%) and First Sentier (25%) comprise the remainder. DWS represents the portfolio mainstay with its core, benchmark-aware approach. Resolution is a highly regarded offering, but there have been more question marks about the First Sentier choice, given some disruptive team changes over the years. Qian and Lam have overseen a sharp improvement in the portfolio's relative performance. This was concentrated in strong 2019 and 2020 years, with FirstChoice's portfolio significantly underweight retail REITs, which helped protect against the worst of the declines across global listed property, and the sector's prior issues. Each of the underlying managers held this stance. Such a strong run is obviously pleasing, though is against the strategy's aim of more consistent alpha generation. Prior to this spell, performance had been middling. And recent excess returns have reversed in the six months to March 2021, as more cyclically exposed stocks have rebounded with global economies reopening. This packaged solution of respectable underlying managers remains a functional exposure to global listed property.

### Morningstar Take by Edward Huynh 21 Sep 2021

FSI Australian Small Companies boasts one of the best teams in the sector, warranting our highest conviction. Head of Australian small- and mid-cap companies Dawn Kanelleas has led this strategy since 2008. Kanelleas is capably supported by two long-standing portfolio managers in Michael Joukhador and Pavlos Totsis and an additional analyst in Tahlia Gugusheff. They are a tight-knit group long on analytical fire power, routinely producing some of the best and most insightful research in the category. Team stability also features here with Kanelleas, Joukhador, and Totsis having worked together for 13 years. This stability has aided in consistent execution of their investment process, which is to find companies with sustainable competitive advantages. Under Kanelleas' tenure, there has been an increased focus on balance-sheet strength and sustainable cash flow, which we think is sensible given the higher inherent risks in small caps. The fund typically displays a mild growth lean, though there's a healthy mix of names across the value-growth spectrum. Strong performance over the last several years has not gone unnoticed, with the strategy growing to \$1.7 billion as of May 2021. The team runs close to \$2.45 billion in small caps (including its mid-cap strategy), easily one of the largest footprints in the cohort, making the strategy less nimble than peers. Our concerns around capacity are partially assuaged by the strategy's historic mid-cap bias, higher-than-average portfolio diversity (typically 40 to 60 names), and lower portfolio turnover. That said, capacity remains a material concern, and we will be watching closely. Additionally, compensation structures are closely linked with the performance of the fund. FSI Australian Small Companies' shrewd and best-in-class operators coupled with a robust process deserve our highest praise. The low 1.11% flat fee is the icing on the cake, making this strategy one of the best ways to get exposure to Australian small caps.

### Manager's Quarterly Comments 30 Sep 2021

The fund performed in line with its benchmark over the September quarter. There were no meaningful changes to strategy or portfolio positioning during the quarter. Throughout the period the portfolio remained well diversified across a range of Negotiable Certificates of Deposit, Convertible Term Deposits, Deposit Accounts and Residential Mortgage Backed Securities. To minimise risk and with capital preservation in mind, there remained a focus on the quality of all securities held in the portfolio. All are AUD-denominated, and are highly rated by ratings agencies as well as the fund's own internal credit analysts. Unfortunately, prospective returns from these securities remain low, suggesting the Fund is unlikely to start generating more meaningful returns for the foreseeable future. That said, the fund will continue to monitor the new issuance pipeline to see whether any new securities can improve the existing diversification in the portfolio and help achieve the Fund's stated performance objectives.

## Morningstar Take by Edward Huynh 17 Sep 2021

Investors Mutual Australian Share's robust and well-executed process make it a top pick for value- and quality-focused investors. IML was founded by Anton Tagliaferro in 1998, with IML maintaining the same value and quality approach through all market cycles. Natixis' stake has steadily grown following its acquisition of the group in 2017 and now stands at 70%. Tagliaferro has progressively sold down his equity stake, is no longer involved in day-to-day management, and is now fully devoted to investment efforts. The portfolio is helmed by three experienced portfolio managers in Tagliaferro, Hugh Giddy, and Daniel Moore, who run sleeves of 25%, 50%, and 25%, respectively. They approach each of their sleeves through a slightly different lens, so there are some holding disparities despite the same underlying analyst pool. The strength of the analyst team is apparent, with consistently excellent insights and depth of research. The fundamental bottom-up value approach targets companies with competitive advantages and quality management, displaying steady predictable earnings streams. Environmental, social, and governance issues have long been a mainstay of IML's approach, though recent enhancements bring ESG to the fore and now represent a greater proportion of IML's proprietary quality score. IML's investment discipline is one of the strictest in the market, comprehensively assessing companies to ensure the resulting portfolio is low turnover and low volatility. Portfolio positions are determined both by price targets and the level of conviction in predicted future cash flows. Performance has been disappointing following the coronavirus sell-off, with poor upside participation owing largely to low resource and banking exposure. Additionally, value's resurgence during early 2021 didn't see IML's brand of value rewarded, resulting in both index- and peer-relative underperformance. Despite the recent troubles, we retain strong conviction in IML and maintain that the strategy is still one of the best ways to get exposure to Australian equities with a value quality focus.

**Morningstar Take** by Michael Malseed 07 Jul 2021

Our conviction in the differentiated approach and tight-knit team of Ironbark Paladin Property Securities remains strong. Portfolio manager Chris Robinson, co-portfolio manager Todd McFarlane, and small caps specialist Eloise Blake have delivered a strong track record employing a consistent approach since the investment process was enhanced in 2013. Each member's skill set plays well to the process that seeks to generate outperformance of the equity Australia real estate Morningstar Category benchmark from three distinct sources: stock selection in large-cap AREITs, active investment in small-cap AREITs, and selective participation in international deal flow. Importantly, the team continues to exhibit a competitive edge in each area of focus, maintaining an advantage over peers. In large caps the team analyses relative valuations and quality characteristics within each subsector, minimizing factor and style bets while maximizing the returns from superior stock selection. Blake's dedicated focus on small caps ensures the team is ready to capitalize on opportunities in emerging, less efficient, and less researched areas of the market. With Robinson doubling as head of listed real estate securities Asia Pacific, the team leverages its position within global asset manager DWS to take advantage of opportunistic deal flow (usually placements and IPOs) across the globe. The total weight of international holdings isn't expected to exceed 3%-5% at any point in time. Active share has generally been higher than category peers', although the volatility of 2020 saw it reined in somewhat. The fee is 0.86% per year, slightly above average but reasonable for the outcomes being delivered. For investors seeking an actively managed AREIT strategy that can deliver incremental returns above the benchmark, this is an excellent choice.

### Morningstar Take by Chris Tate 25 Feb 2022

The trappings of key-person risk led to a reassessment on multiple fronts in Magellan Global's otherwise solid framework. CIO Hamish Douglass announced a medical leave of absence from Magellan in February 2022, leaving a big void to fill. His indefinite absence exposes Magellan's lack of succession planning across the investment team and the broader business. The firm has had to step outside the immediate team, albeit to somewhat familiar faces. Magellan co-founder Chris Mackay returns to the fold as lead manager; he had relinquished the CIO role in 2012 to focus on managing MFF Capital Investments. Meanwhile, former head of research Nikki Thomas has also rejoined, having departed in 2017. Head of macro Arvid Streimann provides some continuity, having been comanager alongside Douglass since late 2020. We are uncertain how this new three-portfolio manager structure will function going forward, particularly given the turbulent circumstances under which it was assembled. While there is considerable talent amongst the firm's senior investor and analyst team, it has operated largely in the shadows to date. Staff retention is also at risk, contributing to a reduction in our conviction levels. While the revised team have stated a commitment to the strategy's risk-aware process, there are question marks over how it will be executed. Magellan's approach targets a thoughtful balance between high-quality growth stocks and lower-volatility defensive names. This has delivered exceptional results for investors up until some recent missteps. Recent underperformance reflects poor judgment surrounding the regulatory risk in China, rather than a fundamental breakdown in process. A more collaborative team approach is likely to promote more rigorous portfolio discussions. We have long thought the 1.35% annual base fee plus 10% performance fee to be above market, which places added weight on our view under our ratings methodology. While Magellan's foundations remain intact and give some reason for positivity, a period of stability and improved execution is required to recapture its preeminent status.

### Morningstar Take by Edward Huynh 15 Sep 2021

Despite a recent dip in performance, we maintain our steadfast conviction in Magellan's class-leading process and expect it to deliver in the longer term. Head of infrastructure and lead portfolio manager Gerald Stack helms the strategy and team of eight. Stack is a meticulous investor, demonstrating excellent judgment and stock-picking prowess since the strategy's inception in 2007. Stack is capably supported by portfolio managers Offer Karliner, Ben McVicar, Jowell Amores, and David Costello. The team are one of the most insightful within the cohort with consistently strong analysis and insights. Magellan's process is more conservative than some peers, applying a strict definition of infrastructure resulting in a portfolio distinctly different from the benchmark. To be considered for inclusion, a company must possess an asset that is essential for the efficient functioning of society and have profits that aren't overly affected by competition, commodity prices, or sovereign risks. The risk-conscious approach tends to lead to greater utilities allocations than peers with greater infrastructure allocations depending on economic conditions and market opportunity. We appreciate the measured approach though note this can lead to underperformance in uncertain markets when conservatism wins over opportunism. For instance, defensive cash allocation peaked at 15% following the coronavirus market dislocation, remaining at close to 10% for the remainder of 2020, hurting the fund as markets bounced back. Despite this, we remain confident in Magellan's approach to infrastructure, especially the downside protection afforded to investors during market sell-offs. One slight on the strategy is the above-average fee of 1.05% per year plus performance fee (subject to high-water mark); nevertheless, we think the cost is well worth it to gain expertly managed exposure to infrastructure.

**Morningstar Take** by Tim Wong 12 Feb 2022

Our admiration for MFS Global Equity stems from the redoubtable, high-quality decision-makers implementing a sensible, measured approach at an inexpensive fee. This stable operation sees comanagers Roger Morley and Ryan McAllister construct a portfolio in line with their exacting quality and growth standards, utilising the shop's extensive global analyst pool. Both are long-standing employees; Morley has been established as a fine investor here for many years. McAllister's transition to comanager in 2016 has been as smooth as could be hoped; he's steadily broadened his knowledge across industries and worked cohesively with Morley and the broader analyst group, the latter providing a sturdy base for identifying potential investment ideas. Importantly, the portfolio has retained the key ingredients that have rewarded investors for well over two decades, methodically seeking reasonably priced companies with enduring competitive advantages. We've long been fans of this approach; it's straightforward and disciplined and willing to ignore index weights, as seen in its long-standing skew to industrials and healthcare companies at the expense of commodities and tech. This, combined with the long-term mindset, can see performance veer well away from the market. Unfortunately, this has been on the negative end latterly, while more borderline prospects have also hindered medium-term results particularly compared with MFS' more-concentrated sibling. Without excusing this subpar run, prudent portfolio construction has meant that problem stocks have usually been smaller exposures, while this strategy has never sought the fastest-growing firms that have been among the key missed opportunities. It's worth remembering that styles can shift from favour, and the team has continued to identify plenty of longer-term winners in other industries. Capacity management is another hallmark here; the shop consistently puts client interests first. Its low fee cements its appeal. In short, we remain as optimistic as ever that MFS Global Equity can outperform the market over a full cycle.

**Morningstar Take** by Matthew Wilkinson 03 Feb 2022

A canny leader takes the Perpetual Wholesale Diversified Income process and delivers an attractive solution for this risk-aware credit offering. Vivek Prabhu, the portfolio manager, has been at the helm here since 2008 having been at Perpetual for 17 years. His 29 years of industry experience shows in the way he analyses the credit market, including global regions and sectors. The team six other portfolio managers and analysts supporting Prabhu, while still healthy, has been weakened with the departure of an analyst in November and another due to leave in February. Fortunately, Michael Korber, the managing director of credit and fixed-income team, and Greg Stock, head of credit research, are key members of the team and bring significant investment experience across the various fixed income strategies at Perpetual. It's that kind of experience that enables the team to have a measured approach to risk born from sound credit research as well as economic and technical analysis. The portfolio typically consists of two buckets: the core element, representing liquid investment-grade securities, and the plus bucket, consisting of higher-yielding, less liquid, lower-credit-quality assets. Pleasingly, the team has shown skill in balancing these elements, with the core bucket typically representing 90% of the portfolio, most of that in Australian exposure. The group are, however, comfortable chancing their arm into global credits when value opportunities present themselves, an allocation that typically ranges between 10% and 30% of the portfolio. Prabhu is happy to take a longer-term view to portfolio construction--an ever-growing allocation to AAA rated paper from 2018 and into 2019 based on safer relative valuations is an example. The position held back relative performance until March 2020 when market volatility allowed a rotation into higher yielding plays. Such portfolio positioning can court bouts of peer underperformance but over the long term risk-adjusted returns look favourable. Thankfully, the wholesale vehicle's fee reduction to 0.59% makes it even more attractive. The key elements are here for Perpetual Wholesale Diversified Income, solid and experienced leadership with a process focused on risk-credit investors should give it a look.

### Morningstar Take by Tim Wong 28 Dec 2021

Our ongoing confidence in Pimco Australian Bond is a byproduct of the strength it boasts across its investment group and the team's ability to enact global insights effectively. A settled and diligent leadership group includes team leader Robert Mead alongside Adam Bowe and Aaditya Thakur. The growing influence of members such as Thakur on global discussions shows that there is clearly more to the local group than just Mead, which we welcome. The transition to relying more on offshore colleagues for researching credit has been just about seamless, with corporate bonds continuing to be a boon for relative performance, and the Australian team is accustomed to engaging with offshore counterparts to assess and make interest-rate duration and sector calls. Investing up to 30% offshore and enacting currency bets remains a differentiator here. It doesn't guarantee outperformance and more-pronounced risks can materialise—indeed, emerging-markets debt was a major factor in this portfolio's wobble in early 2020 amid coronavirus-related risk aversion. That said, Pimco's global expertise and insights remain advantageous in our eyes, especially in this relatively narrow universe with a starting point of historically low yields and tight credit spreads. Our faith in the rigour behind decisions instils confidence that the team will act prudently more often than not. Mead has had some misses in managing duration over several years now, which has weighed on index-relative returns; clearly, such a run is not ideal. We don't think this is indicative of an impaired approach and remain heartened that the global group has continued to utilise this lever effectively given the non-Australian-dollar exposure, while other elements such as credit have kept this portfolio on track. Meanwhile, the fees here aren't that competitive following cost cuts by some rivals over the last few years, which is disappointing given the scale of assets at hand. Overall though, Pimco Australian Bond remains a highly commendable strategy that is hard to beat.

### Morningstar Take by Tim Wong 03 Dec 2021

Pimco Global Bond's three skilled portfolio managers draw on the firm's extensive resources, benefitting from a flexible, diversified approach. Andrew Balls, Sachin Gupta, and Lorenzo Pagani have been at the helm here since late 2014, Gupta taking over the Australian vehicle at the start of 2016 with Balls his backup. This trio and the vast investment team is well-equipped to cover rates, currencies, corporates, and structured credit. The investment committee's top-down views guide the strategy's broad positioning. Within the scope of those themes, the team considers relative valuations to determine sector, country, and yield-curve positioning. Gupta clearly links these ideas with his meticulous understanding of the portfolio. Considerable flexibility has seen chunky allocations to corporate bonds and emerging-markets debt at times, with sovereign bonds typically anchoring matters. The strategy has tended to stay on the shorter side of the benchmark's duration under this group. This has helped limit the pain of interest-rate shocks (such as the first quarter of 2021) but has also weighed on the longer-term returns against the backdrop of steady to declining rates. Importantly, there have been other avenues for success in areas where the shop has shown skill over extended periods, including in corporate and securitised bonds and currencies and where its resources largely surpass most competitors. Having said that, the team has been wary of making outside bets when it sees few obvious valuation opportunities, so returns can be indexlike at times. Still, left-field events can expose ill-judged attempts to balance risk and reward, and the team's ability to capitalise on the disruption wrought by the coronavirus in early 2020—a liquidity-driven dip in March notwithstanding—was a reminder of its judicious approach and judgment in distinguishing between substantive and fleeting issues. Low yields and narrow credit spreads remain obstacles to repeating past absolute returns, but this shouldn't be seen as a barrier to investing here. All told, this team is well-equipped to capitalise on this strategy's mandate and deliver a top-shelf diversifier in our view.

## Morningstar Take by Ksenia Zaychuk 09 Jun 2021

Thorough research process and experience of senior staffers underpin our conviction in Platinum International, but more recent team reshuffles and lack of stability temper our view. There have been a few shifts to the portfolio manager allocations on this strategy this year. At the beginning of the year, Andrew Clifford ran 70% of the assets and Clay Smolinski managed 30%. Effective April 2021, the structure has changed, with Clifford managing 51%, Smolinski running 31%, and Nik Dvornak looking after 10% of the assets. The remaining 8% of the portfolio is managed by senior analysts. While some of these changes were driven by staff departures, others were introduced to encourage staff development and retention. We remain watchful of these developments. Clifford, whom we hold in high regard, now has a lot on his plate as co-portfolio manager of Platinum Asia and CEO and co-CIO of Platinum Group. Smolinski was appointed co-CIO effective 1 April 2021. While portfolio managers are ably supported by a large team of analysts, Platinum has periodically lost experienced staffers. We view departures of seasoned portfolio managers like Joseph Lai and experienced analysts like Doug Huey as a loss. While we still applaud the analyst research overall, they have slipped from being one of the best global equity teams in our view. Platinum uses a wide variety of tools, such as active currency management and short-selling, but these levers haven't always delivered consistent outcome. The firm doesn't pay any attention to benchmarks and invests wherever the best opportunities are identified. This can lead to meaningful sector and regional tilts, which can cost at times. For example, a near 40% underweighting the US over five years to 31 Dec 2019 detracted; however, long-term exposure to semiconductors and resources has paid off handsomely over the last six months (to 31 March 2021). The team has also struggled to demonstrate a strong and sustainable shorting skill set. All up, we retain faith in the portfolio managers here, but team evolution and process missteps (especially around shorting) remain our watchpoints.

**Morningstar Take** by Tim Wong 05 Feb 2022

Schroder Absolute Return Income has a team with sound credentials that keeps a watchful eye on the risks taken in this portfolio. This long-standing vehicle is underpinned by Australian and global investment-grade credit with cash a significant component when the team is cautious over outright valuations. Valuation has been and remains highly influential, though the strategy has evolved. For one, it's deployed interest-rate duration more expressly alongside currency positions as alternative sources of returns beyond credit markets and also navigates periods of elevated risk aversion. Change here isn't new, as hybrids used to dominate prior to the global financial crisis. Schroders' desire to lessen reliance on credit with spreads near historically low levels makes some sense, and importantly, the team has typically maintained a conservative portfolio that's conscious of limiting downside risks to capital. Schroders has used its broader canvas effectively for the most part, with these tools on full display in 2020 as it shifted between defensive and aggressive postures to navigate the wild swings in pricing and sentiment. This steady, veteran unit features Mikhel Kase as the portfolio's lead, while Stuart Gray heads the fundamental credit research team and process that emphasises a minimum risk/reward threshold. Major credit-related missteps have been largely avoided, pleasingly. One point of conjecture is that the conservative mentality has contributed to elevated cash levels--a meaningful opportunity cost historically--highlighting the tricky balance in also delivering attractive absolute returns. As such, Schroders' profitable move to take more credit risk to capitalise on the 2020 sell-off is encouraging, while it's helpful to remember the solid risk-adjusted outcome here as well. The team's resolute attitude should prove rewarding whenever risk becomes priced more meaningfully into credit. Ultimately, we see this steadfast unit attaining successful results over the cycle with this strategy.

### Morningstar Take by Ross MacMillan 14 Sep 2021

Schroder Australian Equity Fund features outstanding portfolio managers, an experienced investment team, and a long-standing meticulously applied process, which ensures our continuing high level of conviction. Consistency, stability, and long tenure are key attributes we seek in portfolio managers and investment teams. Undoubtedly, the key decision-makers behind stock selection and portfolio construction for this strategy possess all three characteristics. Head of Australian equities Martin Conlon has managed this fund since 2003, after joining Schroders in 1994, while deputy head of equities Andrew Fleming has been with Schroders since 2007 and has 30 years of investing experience. Conlon and Fleming are especially thoughtful in researching companies and understanding the economic backdrop when building the portfolio. In addition, the broader investment team, which includes a head of research, two portfolio managers, four qualitative research analysts, and two quantitative data analysts, are knowledgeable and perceptive. Schroder's investment process involves detailed fundamental bottom-up company assessments to gain an understanding of quality and value. The primary focus of the research is appraising a company's pricing power, long-term sustainability, and midcycle earnings. We appreciate that, despite the challenging conditions over the past two years, the team has assiduously applied the repeatable investment process. In addition, we applaud the team's multiple-perspectives approach when scrutinising company risks, including environmental, social, and governance issues and thematic influences. The resulting benchmark-aware portfolio of around 40-70 stocks is long-term, balanced, and value-tilted. The strategy, over the medium and long term, has outperformed most Morningstar Category peers over five and 10 years but slightly underperformed the index, on a trailing returns basis, to 31 August 2021. However, ultimately, Schroder Australian Equity has strong foundations, which helps us maintain our high confidence.

# Managed Fund Investment Detail Disclosure Statement - Advanced

## Quick Stats

**Morningstar Category:** A fund category is based on exposure to asset classes, investment sectors, the investment style and market-cap allocation, and the associated risk and return characteristics of funds. The objective of the classification system is to provide groupings of funds which can be reasonably considered to be close investment alternatives and for which performance and other statistics such as fees are comparable.

**Morningstar Analyst Rating:** a qualitative assessment of five key pillars we believe will identify funds most likely to outperform over the long term on a risk-adjusted basis (People, Process, Parent, Performance, and Price). The Analyst Rating operates on a five-point scale: 'Gold', 'Silver', 'Bronze', 'Neutral', and 'Negative'. 'Under Review' means that a change at a rated fund requires further review to determine the impact on the rating. 'Not Ratable' means that either a fund has failed to provide sufficient transparency to determine a rating, or that we are providing information on a new strategy where investors require guidance as to suitability, but there is not yet sufficient information to rate the fund.

**Flagship Fund Analyst Rating:** specific to platform versions of the relevant strategy. Australia and New Zealand funds carrying this rating have not been rated under the Morningstar Analyst Rating methodology. The Flagship Fund Analyst Rating recognises that platform versions can have negotiable fees and reliable representative cost data can be hard to come by. As a result, platform versions will retain the linkage and the rating of the Flagship share class.

**Morningstar Rating:** The rating is calculated for funds with at least a three-year history based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a fund's monthly performance. The top 10% of funds in each peer group receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The peer group is determined by the fund's Morningstar Category and Legal Type. The Overall Morningstar Rating for a fund is derived from a weighted average of the performance figures associated with its three-, five- and ten-year (for Australia) or three- and five-year (for New Zealand) Morningstar Rating metrics.

## Morningstar Take

The Morningstar Take is a summary of Morningstar's overall opinion of the fund manager's strategy and capabilities in the asset class. If Morningstar has not qualitatively reviewed the manager, the PDS Objective and Fund Investment Strategy will appear in its place.

## Performance

The performance data given represents past performance and should not be considered indicative of future results. Principal value and investment return will fluctuate, so that an investor's shares when redeemed may be worth more or less than the original investment.

**Growth of \$10,000:** The graph compares the growth of \$10,000 in a fund with that of a capital market index chosen by Morningstar and with that of the average growth for all funds in its Morningstar peer group. The index is an unmanaged portfolio of specified securities. The index and the category average do not reflect any initial expenses however the category average returns are net of ongoing fees. A fund's portfolio may differ

significantly from the securities in the index.

**Quartile Rank:** The graph represents the fund's total return percentile rank among funds in the same peer group. The black bar on the graph represents the quartile in which the fund-performance ranking falls. If the top quarter of the graph is shaded, for example, the fund performed among the top 25% of its category that year.

Total return reflects performance without adjusting for sales charges but is adjusted to reflect all actual ongoing fund expenses and assumes reinvestment of distributions. Growth return is the percentage change in the scheme's soft close exit price adjusted for any capital re-organisation. Income return is the total return less growth return and reflects the level of distributions from a fund. For Australian funds, performance is not adjusted for taxation. For New Zealand PIE funds, tax credits are added back to the performance. For New Zealand non-PIE funds returns are calculated net of tax. Trailing returns for periods over one year are annualised.

Tax-Adjusted return is a pre-liquidation performance calculation for Australian funds only that assumes the taxed distribution amount (as opposed to the gross distribution amount used in the total return calculation) is reinvested.

## Risk Measures

**Standard deviation:** Is a statistical measure of the volatility of the fund's return.

**Sharpe ratio:** A risk-adjusted measure calculated by using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe Ratio, the better the fund's historical risk-adjusted performance.

**Alpha:** A measure of the difference between a portfolio's actual returns and its expected performance, given its level of risk as measured by beta. A positive Alpha figure indicates the portfolio has performed better than its beta would predict.

**Beta:** A measure of a fund's sensitive to market movements. If beta is greater than one, movements in value of the fund that are associated with movements in the value of the benchmark tend to be amplified.

**R-Squared:** Measures the relationship between a portfolio and its benchmark. It can be thought of as a percentage from 1 to 100. R-squared can be used to ascertain the significance of a particular beta or alpha. Generally, a higher R-squared will indicate a more useful beta figure.

## Fees

**Total Cost Ratio:** The Total Cost Ratio (Prospective) represents the forward-looking figure encompassing the total non-discretionary fees and costs associated with managing and administering collective investment products.

**Buy-Spread:** The Buy-Spread is a transaction cost incurred by the investor that reflects an estimated transaction costs incurred by the fund in dealing with the underlying securities as shown in the PDS.

**Sell-Spread:** The Sell-Spread is a transaction cost incurred by the investor that reflects an estimated transaction costs incurred by the fund in dealing with the underlying securities as shown in the PDS.

**Performance Fee Costs:** Performance Fee shown in the

"Fees and Costs Summary" table in the PDS. It is intended as a representation of potential on-going performance fee expenses and is a calculated average using the performance fee costs from the last five financial years (or as many as the performance fee was applicable). This amount includes the Performance Fee costs arising from Interposed Vehicles.

**Investment Management Fee:** The Management Fee (MIS) and Investment Fees (Super) shown in the PDS, that is attributable to investment management, which are fees and costs an investor would expect to be charged over the year. This excludes the costs arising from interposed vehicles.

**Administration Fees and Costs (Super Funds only):** The Administration Fees and Costs shown in the "Fees and Costs Summary" table in the PDS. This includes OTC Derivative Costs deemed to be Administration costs.

## Portfolio

**Composition:** The graph represents a breakdown of the fund's holdings into general investment classes based on surveyed data provided by the fund manager.

**Morningstar Style Box:** For equity funds the vertical axis shows the market capitalization of the stocks owned and the horizontal axis shows investment style (value, blend or growth). For fixed-income funds the vertical axis shows the average credit quality of the bonds owned, and the horizontal axis shows interest rate sensitive as measured by a bond's duration (short, intermediate or long).

**Top Holdings:** The largest exposure of eligible securities within a fund's portfolio. Portfolio holdings information is based on the most recent information available to Morningstar, and eligible securities are defined by Morningstar's Global Methodology team, and will exclude positions not considered core to the portfolio.

**Top 5 Sector Weightings:** The Morningstar sector structure divides the stock universe into 129 industries ranging from semiconductors to medical equipment. These industries are classified into 41 industry groups, which are then used to construct 12 separate sectors.

**Top 5 Countries:** The largest geographical exposure of a fund's stock assets. Country assignments are based on the primary exchange where each stock is traded.

## Operations

**Minimum Initial Investment:** The smallest investment amount accepted by the product to establish a new account.

**Minimum Additional Investment:** The amount required to make subsequent investments in the product.

**Minimum Withdrawal:** The smallest amount that can be taken out of the product at one time.

**Switching Allowed:** If it's possible to switch between investments in the same offer document.

**Distributions Frequency:** The number of times per year a fund intends to distribute for the life of the offer document.
