© 2022 Marningstor Inc. All rights reconved Neither	Morningstor its offiliates per the

as the market evolves rather than being wedded to a

single value substyle. Investors should note that

portfolio rotation is an outcome of the bottom-up selection rather than an explicit macro call. Owing to

the natural tilting of the portfolio, deep-value rallies may leave this strategy behind owing to the portfolio

holding defensive value names as seen in 2016 and 2021. This process results in a diversified 50- to

70-stock portfolio with a true investor mindset;

commensurately, active share is high and turnover

low. The underlying strategy has been running since

2010 and has performed in line with the MSCI World

Index and well ahead of most of its value peers, given

its ability to tilt towards defensive value. This is a

commendable long-term performance profile. Barrow

Hanley's disciplined stock selection skills driving a

dynamic weighting to defensive and cyclically oriented names continues to deliver through the cycle.

back their research has resulted in significant

underweightings in the major US and euro

government-bond markets and a consequential

significant overweighting in countries such as

Malaysia, Columbia, and Mexico. The constraints in

their process, including being sovereign-only, not

being able to go short, and a cap on underweighting

duration relative to the benchmark, led to slightly

underwhelming performance in recent years. However

the discipline of their approach paid dividends in calendar 2022 as the long-standing underweightings in European and US bonds drove strong

outperformance against the FTSE WGBI Index. While higher-than-average fees on some of the strategy's share classes are a a headwind, for patient investors, Colchester remains a worthwhile option in the

long-short strategies), easily one of the largest footprints in the cohort and making this strategy less

nimble than peers. However, our concerns around

capacity are partially assuaged by the strategy's

liquidity considerations at the stock level, tendency to

higher-than-average portfolio diversity (typically 40-60

names), and relatively low portfolio turnover.

Nevertheless, capacity remains a watch point. Over

the trailing 10 years to 30 Sept 2022, the strategy has

comfortably outperformed the category index and most peers. The final showpiece is the strategy's low

annual management fee of 1.11%, with no

performance fee, which is highly attractive compared

against peers. All in all, FSI Australian Small

### CFS FC W PSup-Investors Mutual W Aus Shr FSF0592AU

#### Morningstar Take by Steven Le 09 Nov 2022

Investors Mutual Australian Share remains one of our top picks for investors seeking value and quality Australian equity exposure. Anton Tagliaferro, Investors Mutual Limited's founder and investment director, will retire on 31 March 2023. Tagliaferro will relinquish his 25% sleeve to Daniel Moore at that time, increasing his sleeve to 50%, with the remaining 50% staying with Hugh Giddy. While it is disappointing to see an experienced and knowledgeable portfolio manager step down, we believe IML has handled the succession planning in a responsible and measured manner. We also believe the portfolio will remain in highly capable hands. Moore and Giddy are experienced portfolio managers, running this strategy alongside Tagliaferro since 2013 and 2010, respectively. There are some holding disparities given they approach each of their sleeves through a slightly different lens, however the depth of research and investment insights have consistently been excellent over the years. The fundamental bottom-up value quality approach targets companies with competitive advantages and quality management, displaying steady predictable earnings streams. Environmental, social, and governance issues have long been a mainstay of IML's approach, though recent enhancements have upweighted ESG in IML's proprietary quality scoring for individual stocks. IML's investment discipline is one of the strictest in the market, comprehensively assessing companies to ensure the resulting portfolio is low turnover and low volatility. Portfolio positions are determined both by price targets and the level of conviction in predicted future cash flows. The strategy's performance has been exceptional against peers but only marginally ahead of the category index over the trailing 10 years to September 2022. That said, the index-relative performance is a laudable result given the headwinds that value has experienced over the past decade. Despite the upcoming retirement of IML's founder and investment director, we continue to have high regard for the team, and view this strategy as one of the best offerings in its Morningstar Category.

**Medalist Rating Details** Data Coverage --% Analyst-Driven --%

### Morningstar Rating

**PDS Objective** 

The option seeks to achieve a total return after fees and taxes that exceeds the total return of the Benchmark (Bloomberg AusBond Bank Bill Index (50%) and Bloomberg AusBond Composite 0+ Yr Index (50%)) over rolling three year periods, by investing in a diversified portfolio of predominantly Australian income producing assets.

#### **Fund Investment Strategy**

The option is actively managed and is an integrated and diversified fixed income solution designed to make tactical investment decisions between cash, longer duration fixed interest securities and higher yielding securities, throughout every step of the investment cycle

valuation opportunities, so returns can be indexlike at times. To be fair, unexpected scenarios can expose

ill-balanced risk-taking, and the team has been willing to press when opportunities knock, such as in the

wake of the coronavirus disruption in early 2020, indicative of its judicious approach to distinguishing

between substantive and fleeting issues. Importantly,

the group has shown skill over extended periods in

other avenues, such as in corporate and securitised

bonds and currencies and where its resources largely

surpass most competitors. The strategy has tended to

stay on the shorter side of the benchmark's duration

under this team's watch; this has weighed down

returns historically, though it has helped limit the pain

of interest-rate shocks (such as the first quarter of

2021 and again through much of 2022). All told, the record here is admirable. We are highly confident that

Pimco Global Bond deserves an allocation as a Core

exposure within diversified portfolios.

#### **PDS Objective**

The option's investment objective is to exceed the total returns of the FTSE EPRA/NAREIT Developed Index (AUD Hedged) after fees over a rolling three year basis. In doing so, the option aims to provide investors with a level of distributable income combined with the potential for long term capital growth sourced from global real estate based revenue streams.

#### **Fund Investment Strategy**

The option primarily invests in global property securities that derive most of their returns from rental income. Its investments provide exposure to underlying real estate from around the world including office buildings, shopping centres, industrial warehouses, residential communities, hotels and healthcare facilities. The option may also have exposure to companies which undertake activities such as real estate development, real estate construction contracting and real estate funds management activities. The option hedges currency risk.

Morningstar Pillars Process **Medalist Rating Details** Data Coverage --% Analyst-Driven --% Morningstar Rating

#### **PDS Objective**

To provide long-term capital appreciation by investing primarily in a diversified portfolio of companies that have the potential for above average and sustainable rates of earnings growth. The option aims to outperform the MSCI All Country World (ex Australia) Index - Hedged over rolling three year periods before fees and taxes.

#### Fund Investment Strategy

T. Rowe Price believes that active management, driven by bottom-up fundamental research, can uncover and exploit anomalies among global equities. The team applies a global, high-conviction, and growth-oriented approach, looking for companies with the potential for either growth or relative improvement, located in industries where the outlook is becoming more attractive across developed and emerging markets. The option aims to hedge currency risk.

### **Managed Fund Investment Detail Disclosure Statement - Advanced**

#### Quick Stats

### Morningstar Category $^{\mathrm{\tiny M}}$

Based on exposure to asset classes, investment sectors, the investment style and market-cap allocation, and the associated risk and return characteristics of funds. The objective of the classification system is to provide groupings of funds which can be reasonably considered to be close investment alternatives and for which performance and other statistics such as fees are comparable.

#### Morningstar Medalist Rating ™

Is the summary expression of Morningstar's forward-looking analysis of investment strategies as offered via specific vehicles using a rating scale of Gold, Silver, Bronze, Neutral, and Negative. The Medalist Ratings indicate which investments Morningstar believes are likely to outperform a relevant index or peer group average on a risk-adjusted basis over time. Investment products are evaluated on three key pillars (People, Parent, and Process) which, when coupled with a fee assessment, forms the basis for Morningstar's conviction in those products' investment merits and determines the Medalist Rating they're assigned. Pillar ratings take the form of Low, Below Average, Average, Above Average, and High. Pillars may be evaluated via an analyst's qualitative assessment (either directly to a vehicle the analyst covers or indirectly when the pillar ratings of a covered vehicle are mapped to a related uncovered vehicle) or using algorithmic techniques. Vehicles are sorted by their expected performance into rating groups defined by their Morningstar Category and their active or passive status. When analysts directly cover a vehicle, they assign the three pillar ratings based on their qualitative assessment, subject to the oversight of the Analyst Rating Committee, and monitor and reevaluate them at least every 14 months. When the vehicles are covered either indirectly by analysts or by algorithm, the ratings are assigned monthly. For more detailed information about the Medalist Ratings, including their methodology, please go to the Section titled "Methodology Documents and Disclosures"

https://shareholders.morningstar.com/investorrelations/governance/Compliance--Disclosure/default.aspx

Flagship Fund Medalist Rating: specific to platform versions of the relevant fund strategy. Australia and New Zealand funds carrying this rating have not been discretely rated under the Morningstar Medalist Rating methodology as the pillar components (People, Parent and Process) are identical to the underlying fund strategy. The Flagship Fund Medalist Rating recognises that platform versions can have a range of negotiable fees. As a result, platform versions will retain the linkage to the underlying strategy and the rating of the Flagship share class relevant to our view of the strategy's investment merit.

% Data Coverage: the level of data completeness used to generate the overall rating. If the pillar is assigned directly or indirectly by analysts (pillar inheritance), the pillar will have complete data (i.e. 100%). If the pillar is assigned by machine learning algorithm, Morningstar counts the number of data points feeding both the positive and negative models and counts whether the vehicle has strategy-specific data available. A percentage is calculated per pillar. The overall % data coverage is then scaled by pillar weights. Morningstar will not produce a Medalist Rating with less than 80% data availability for algorithm cally assigned pillar assessments.

Analyst-Driven Proportion: displays the weighted percentage of a vehicle's pillar ratings assigned directly or indirectly by analysts (pillar inheritance). For example, if the Parent and Process ratings are assigned directly or indirectly by analysts but the Process rating is assigned algorithmically, the Analyst-Driven Proportion for an actively managed vehicle would disclose that 55% of the pillar weight was assigned by analysts. In the case of a passively managed vehicle the Analyst-Driven Proportion would disclose that 90% of the pillar weight was assigned by analysts.

Morningstar Pillars: The three Medalist Rating

assessment pillars - People, Parent and Process - may be evaluated via an analyst's qualitative assessment (either directly to a vehicle the analyst covers or indirectly when the pillar ratings of a covered vehicle are mapped to a related uncovered vehicle) or using Morningstar's machine learning algorithm. Pillar ratings take the form of Low, Below Average, Average, Above Average, and High.

#### Morningstar Rating ™

The rating is calculated for funds with at least a three-year history based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a fund's monthly performance. The top 10% of funds in each peer group receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The peer group is determined by the fund's Morningstar Category and Legal Type. The Overall Morningstar Rating for a fund is derived from a weighted average of the performance figures associated with its three-, five- and ten-year Morningstar Rating metrics.

#### Morningstar Take

The Morningstar Take is a summary of Morningstar's overall opinion of the fund manager's strategy and capabilities in the asset class. If Morningstar has not qualitatively reviewed the manager, the PDS Objective and Fund Investment Strategy will appear in its place.

#### Performance

The performance data given represents past performance and should not be considered indicative of future results. Principal value and investment return will fluctuate, so that an investor's shares when redeemed may be worth more or less than the original investment.

Growth of \$10,000: The graph compares the growth of \$10,000 in a fund with that of a capital market index chosen by Morningstar and with that of the average growth for all funds in its Morningstar peer group. The index is an unmanaged portfolio of specified securities. The index and the category average do not reflect any initial expenses however the category average returns are net of ongoing fees. A fund's portfolio may differ significantly from the securities in the index.

*Quartile Rank:* The graph represents the fund's total return percentile rank among funds in the same peer group. The black bar on the graph represents the quartile in which the fund-performance ranking falls. If the top quarter of the graph is shaded, for example, the fund performed among the top 25% of its category that year.

Total return reflects performance without adjusting for sales charges but is adjusted to reflect all actual ongoing fund expenses and assumes reinvestment of distributions. Growth return is the percentage change in the scheme's soft close exit price adjusted for any capital re-organisation. Income return is the total return less growth return and reflects the level of distributions from a fund. For Australian funds, performance is not adjusted for taxation. For New Zealand PIE funds, tax credits are added back to the performance. For New Zealand non-PIE funds returns are calculated net of tax. Trailing returns for periods over one year are annualised.

#### **Risk Measures**

*Standard deviation*: Statistical measure of the volatility of the fund's return.

Sharpe ratio: A risk-adjusted measure calculated by using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe Ratio, the better the fund's historical risk-adjusted performance.

Alpha: A measure of the difference between a portfolio's actual returns and its expected performance, given its level of risk as measured by beta. A positive Alpha figure indicates the portfolio has performed better than its beta would predict.

*Beta*: A measure of a fund's sensitive to market movements. If beta is greater than one, movements in value of the fund that are associated with movements in the value of the benchmark tend to be amplified.

*R-Squared*: Measures the relationship between a portfolio and its benchmark. It can be thought of as a percentage from 1 to 100. R-squared can be used to ascertain the significance of a particular beta or alpha. Generally, a higher R-squared will indicate a more useful beta figure.

#### Fees

Total Cost Ratio (Prospective): Represents the forward-looking figure encompassing the total non-discretionary fees and costs associated with managing and administering collective investment products.

*Buy-Spread/Sell-Spread:* A transaction cost incurred by the investor that reflects an estimated transaction costs incurred by the fund in dealing with the underlying securities as shown in the PDS.

Performance Fee Costs: Performance Fee shown in the "Fees and Costs Summary" table in the PDS. It is intended as a representation of potential on-going performance fee expenses and is a calculated average using the performance fee costs from the last five financial years (or as many as the performance fee was applicable). This amount includes the Performance Fee costs arising from Interposed Vehicles.

Investment Management Fee: The Management Fee (MIS) and Investment Fees (Super) shown in the PDS, that is attributable to investment management, which are fees and costs an investor would expect to be charged over the year. This excludes the costs arising from interposed vehicles.

Administration Fees and Costs (Super Funds only): shown in the "Fees and Costs Summary" table in the PDS. This includes OTC Derivative Costs deemed to be Administration costs.

#### Portfolio

*Composition:* The graph represents a breakdown of the fund's holdings into general investment classes based on surveyed data provided by the fund manager.

Morningstar Style Box: For equity funds the vertical axis shows the market capitalization of the stocks owned and the horizontal axis shows investment style (value, blend or growth). For fixed-income funds the vertical axis shows the average credit quality of the bonds owned, and the horizontal axis shows interest rate sensitive as measured by a bond's duration (short, intermediate or long).

Top Holdings: The largest exposure of eligible securities within a fund's portfolio. Portfolio holdings information is based on the most recent information available to Morningstar, and eligible securities are defined by Morningstar's Global Methodology team, and will exclude positions not considered core to the portfolio.

*Top 5 Sector Weightings:* The Morningstar sector structure divides the stock universe into 129 industries ranging from semiconductors to medical equipment. These industries are classified into 41 industry groups, which are then used to construct 12 separate sectors.

*Top 5 Countries:* The largest geographical exposure of a fund's stock assets. Country assignments are based on the primary exchange where each stock is traded.

#### Operations

Minimum Initial Investment: The smallest investment amount accepted by the product to establish a new account.

*Minimum Additional Investment:* The amount required to make subsequent investments in the product.

*Minimum Withdrawal:* The smallest amount that can be taken out of the product at one time.

*Switching Allowed:* If it's possible to switch between investments in the same offer document.

*Distributions Frequency:* The number of times per year a fund intends to distribute for the life of the offer document.
